

Pink Sparkles®

Pink Sparkles® (Malus 'Malusquest' PP 12,482) gracefully combines flower, foliage, fruit and form to create aesthetic appeal each month of the year.

This new crabapple is a distinctive pairing of pink blossoms and glossy deep green foliage. 'Pink Sparkles' is truly a crown jewel with its magnificent color parade.

Pink Sparkles ® features a compact upright form, becoming more pyramidal with age. The tree has a medium growth rate, maturing at 15 feet in height with a graceful spread of 12 feet. This limb structure showcases sparkling cherry red fruit during the autumn.

After a period of freezing temperatures, the radiant red fruit darkens to a deep wine red and remains well into springtime.

As the extended color display comes to a climax, the blossoms become whiter with a tinge of soft pink.

The glossy green summer foliage is resistant to disease. By late summer, the leaves provide a wonderful contrast to the brilliant red fruit.

Abundant masses of bright crimson pink buds start the floral display.

The vivid buds open to a delicate pink petal, creating an exquisite blossom display of warm pink blush.
